1. Introduction

1.1. Purpose

This document is a **User Guide** for **Stickers/Memos module for Magento**. It describes how work with the extension.

This module provides ability to add sliding panels to your website. There are 4 positions for the panels - top, left, right and bottom. Panels can contain texts, images, links, videos, even widgets (forms, etc.).

You can add sliding panels to the selected pages; can bind them to HTML elements on the pages.

Stickers/Memos can be set to display the panels for visitors or logged in customers only.

Sliding panel is a universal tool - promotions, sales, alerts, tips, videos. Even menus for visitors or customers.

Plenty of pre-created design themes will be bound to your design perfectly.

2. Installation and License

2.1. System Requirements

The extension works under Magento from 1.4.x and higher.

The extension works with Apache 1.3.x and higher, PHP 5, Linux or IIS.

The extension's correct work is guaranteed with the following browsers:

- IE7, IE8, IE9
- FireFox 4.x, 5.x
- Google Chrome 15.x
- Safari 5.x

The correct work with other Magento versions, other browsers and Apache/PHP versions is not guaranteed.

2.2. Installation

All our Magento extensions and templates are installed via **IToris Installer**.

Download **IToris Installer** from here <http://www.itoris.com/itoris-magento-installer.html> and un-pack to the root of your website. It will then appear in menu **System ->IToris extensions -> IToris Installer**.

Open it and you will see all our Magento Extensions and Templates, both installed and available. You can install, update and un-install them with one click now.

Find **Stickers/Memos** in the list of extensions and press **Install** button. It will ask for the license key that you will receive after the purchase. Enter the key and submit. The extension will be installed. It will be available in menu **System ->IToris extensions -> Stickers/Memos**.

The screenshot shows the Magento Admin Panel dashboard. The top navigation bar includes links for Dashboard, Sales, Catalog, Mobile, Customers, Promotions, Newsletter, Help Desk, CMS, Reports, and System. A dropdown menu is open for the System menu, showing options like My Account, Notifications, IToris Extensions, Tools, Web Services, Design, Import/Export, Manage Current, Transactional E, Custom Variab, Permissions, Magento Conn, Cache Manage, Index Manage, Manage Stores, Order Statuses, Email Templates, IToris Installer, SmartFormer Gold, Product Tabs Slider, Registration Fields Manager, Multiple Wishlists, Sale Alerts, Stickers/Memos, Store Login Control, Help Desk, Layered Navigation, and "We Miss You" Alerts. The dashboard itself shows Lifetime Sales at \$0.00, Average Orders at \$0.00, and a section for Last 5 Orders with a table that currently has no records.

2.3. License

Stickers/Memos module is website-dependent. By 'website' here we understand the website in Magento terms. Under one Magento installation one license key of the extension can activate all stores/storeviews within one website.

If your configuration has several Magento websites - a separate license will be required for each.

You can switch the license from one website to another – login to <http://www.itoris.com> using the credentials you will receive after the purchase. Go to **My Downloads** area, find your key there and reset it from the current website. Then use it again to activate another website.

The license also includes free life-time updates for the extension.

3. How to Use

3.1. Creating a New Panel

Install **Stickers/Memos** and open it in admin area (**System** → **IToris extensions** → **Stickers/Memos**). You will see the list of created stickers.

The screenshot shows the Magento Admin Panel with the System menu selected. The Stickers/Memos section is active, displaying a list of stickers. At the top right, there is a 'Create Sticker' button. Below the list, there are pagination controls (Page 1 of 1 pages, View 20 per page, Total 2 records found) and a 'Reset Filter' button. The list table has columns for Stores View, Pages, Title, and Status. Two stickers are listed:

Stores View	Pages	Title	Status
Any	index.php/electronics/cell-phones/*	Special Discounts	Active
Any	index.php/*	Contact	Active

To create a new sliding panel press **Create Sticker** button.

There will be the area to create a new sticker:

The screenshot shows the 'New Sticker' configuration page in the Magento Admin Panel. The page has a top navigation bar with 'System' selected. Below the navigation bar, there's a message bar indicating a new version of SmartFormer Gold is available. The main content area is titled 'New Sticker' and includes a 'Back' button and 'Reset', 'Save', and 'Save and Continue Edit' buttons. The 'Sticker Configuration' section contains several fields: 'Title' (text input), 'Status' (dropdown menu set to 'Enabled'), 'Color Scheme' (dropdown menu set to 'Black'), 'Orientation' (dropdown menu set to 'Left edge'), 'Visible to' (dropdown menu set to 'Visitors and Customers'), 'Expand' (checkbox), 'Bind To' (dropdown menu set to 'Page'), and 'Store Views' (a list box showing 'Main Website', 'Main Store', 'English', 'French', and 'German'). To the right of these fields is a 'Pages (one per line):' text area with a small icon in the bottom right corner. Below the text area, there's a note: 'Specify relative URLs, e.g.: index.php/electronics/cameras/*' and 'For exclusions use exclamation mark, e.g.: !index.php/electronics/*'. At the bottom of the page is a 'Content' section with a rich text editor toolbar and a 'Show / Hide Editor' button.

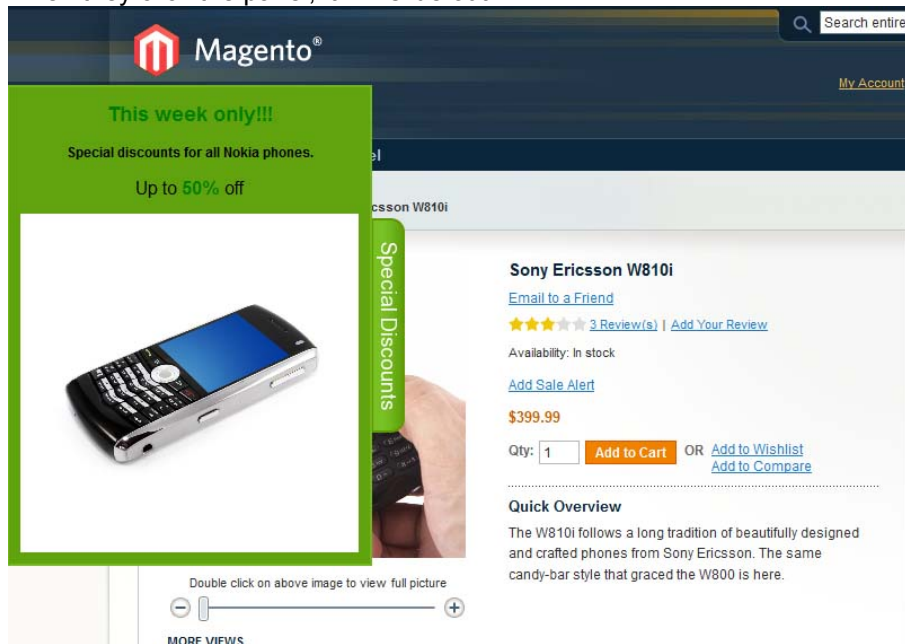

3.1.1. Title

This is the title to be displayed for your customers. For example if we enter Special Discounts title for left-side panel, the customers will see this the following way.

When the page is opened:

When they click the panel, it will slide out:

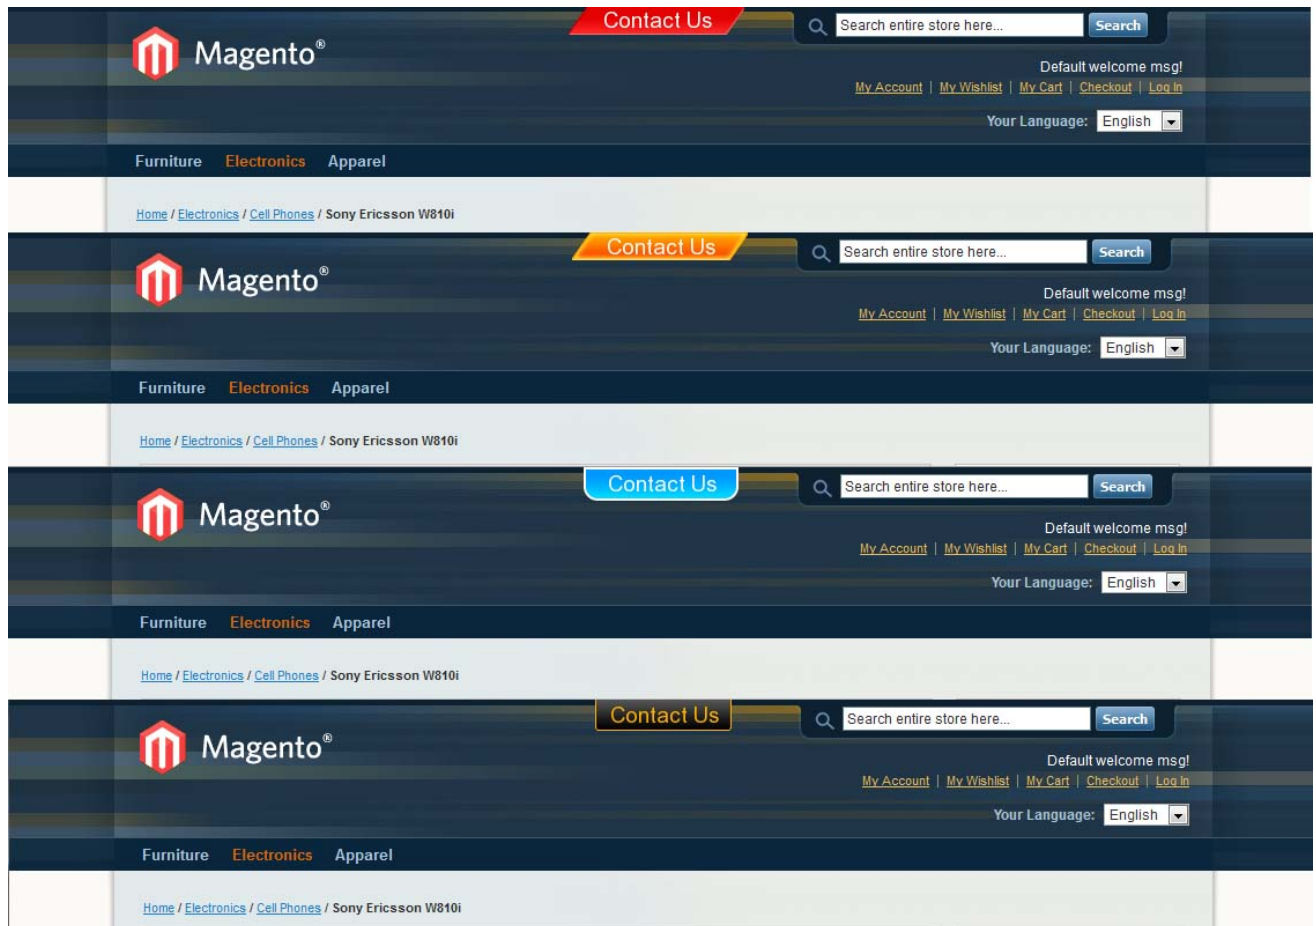

3.1.2.Status

There are two statuses - enabled and disabled. Only enabled sliding panels will be visible on the front-end.

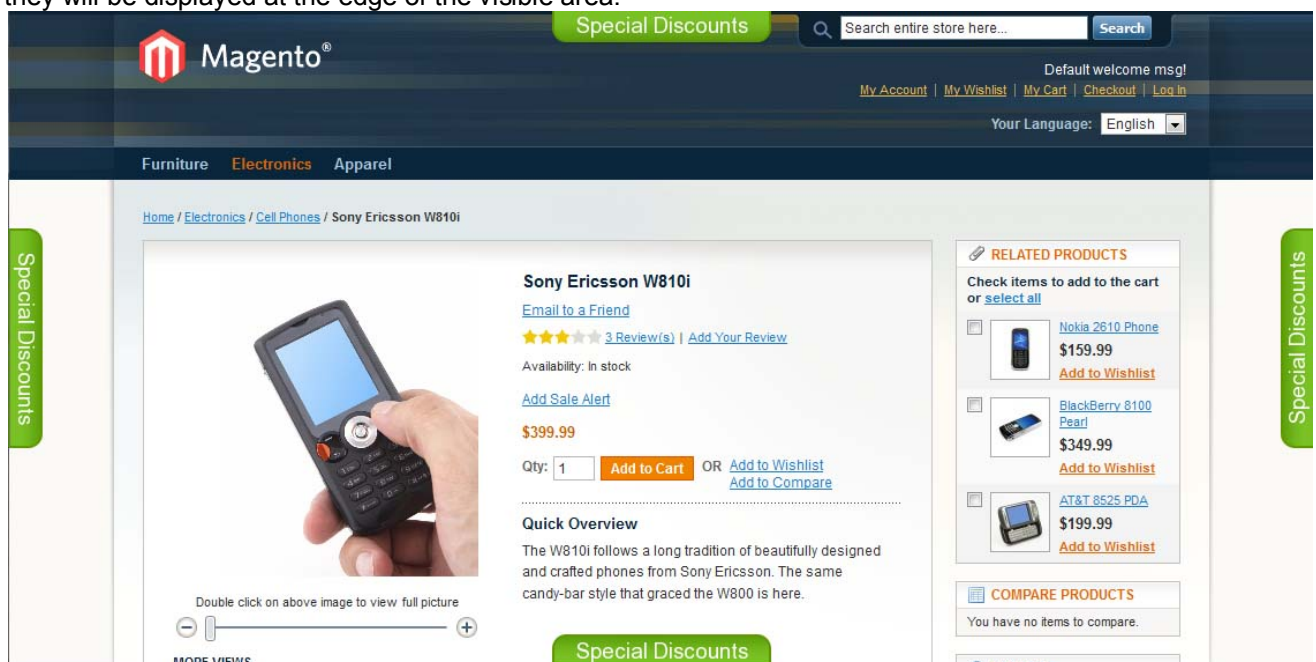

3.1.3.Color Scheme

There are many color schemes included. Select the one that meets your design better. Several samples:

3.1.4.Orientation

There are 4 orientation options - left edge, right edge, top and bottom. If you set panels for pages, then this is the orientation on the page. The panels will be visible independently on the screen size, for smaller screens they will be displayed at the edge of the visible area.

If this is the orientation of an HTML element, for example main product description block, then the panel will be shown at the edge of the block.

3.1.5.Visible to

In this setting you can select who should be able to see the panel. For example you want to add special links to logged in customers only - select Customers. Or you want to stimulate your visitors to create accounts - then make this panel visible to visitors only.

3.1.6.Expand

This is a special effect. If you select it, when the page is opened the panel will slowly slide out automatically, thus attracting even more attention. Please check demo to see the effect.

3.1.7.Bind to

There is ability to bind a panel to a page or to a HTML-element.

When you bind a sliding panel to an HTML-element, there will be a new field to enter the element's ID.

3.1.8.Store Views

Select on which stores the sliding panel should be displayed.

3.1.9.Pages

Enter the pages in this area on which the sliding panel should be displayed.

Rules:

1. Enter relative URLs

Correct:

index.php/electronics/cell-phones.html

Incorrect:

http://www.mysite.com/index.php/electronics/cell-phones.html

2. If you want all URLs of a directory to be included, use "*" sign.

Example:

index.php/electronics*

will display the sliding panel on all electronics pages.

- If you want some URLs to be excluded, not to display the panel, use "!" sign.

Example:

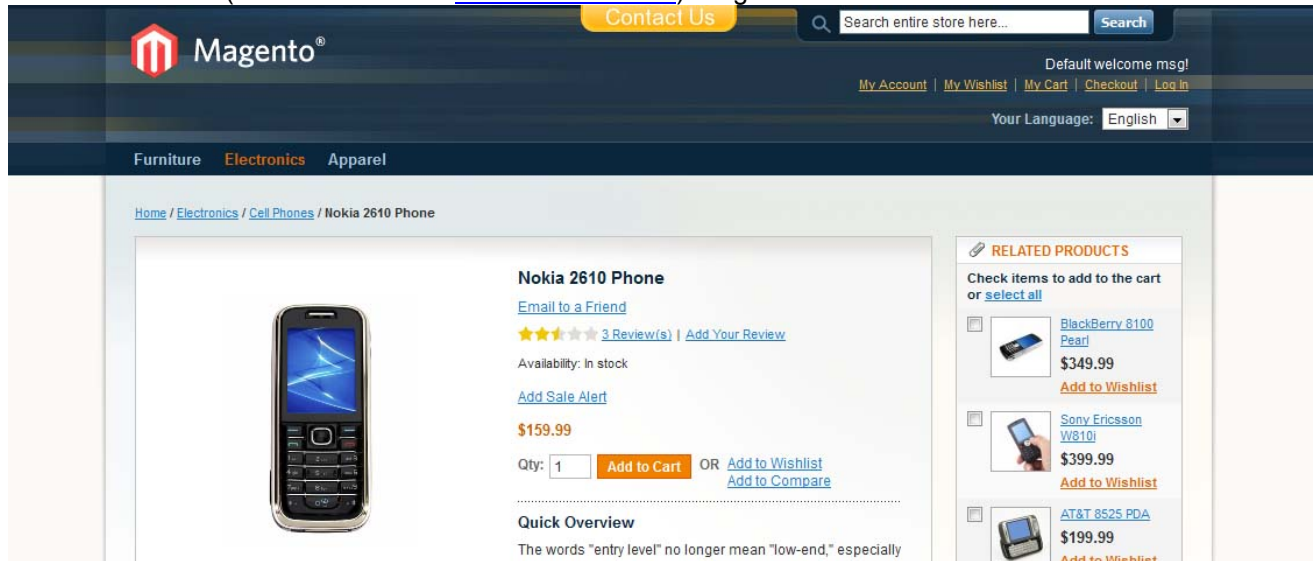

!index.php/electronics/cameras*

Will not display the panel on all cameras pages in electronics.

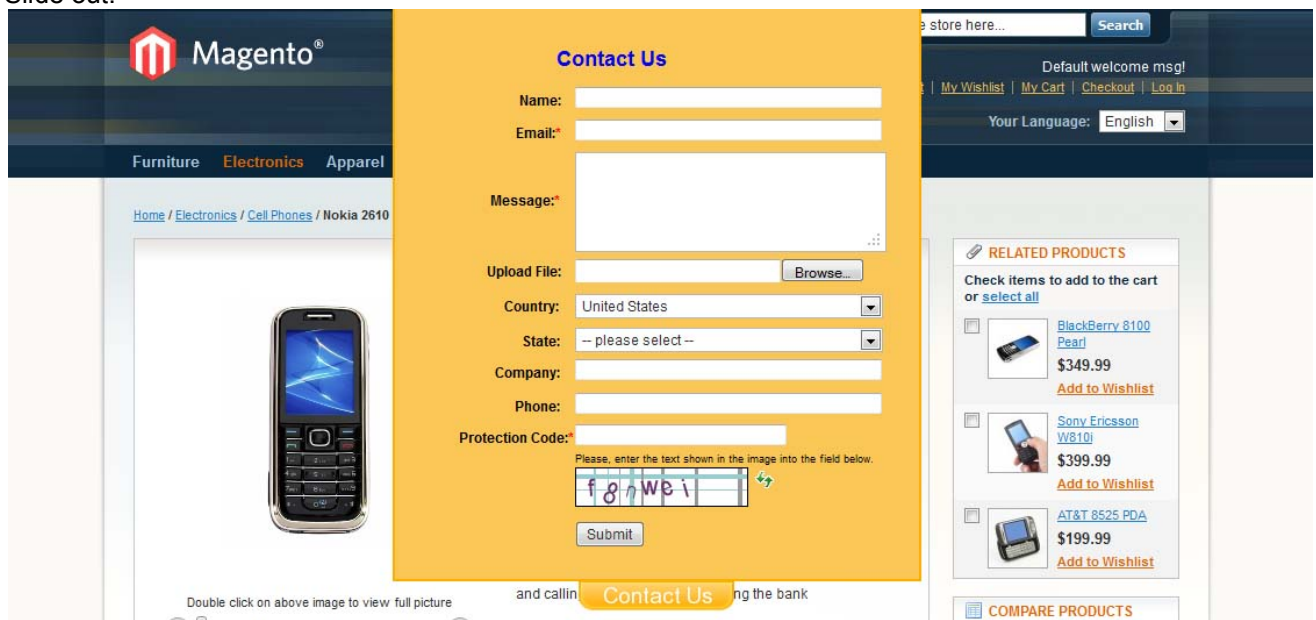

3.1.10. Content

The most important area - here you can create the look of the panel. WYSIWYG Editor allows adding and styling texts, images, links.

You can embed video in the sliding panel. Some widgets are available as well. For example, custom contact form is embedded (form is created on [SmartFormer Gold](#)). Regular look:

Slide out:

3.2. Sliding Panels' List

All sliding panels are available when you select **System -> IToris extensions -> Stickers/Memos**. You will see all existing stickers there:
