## 1. Introduction

Digital Signature plug-in is used to sign the forms using the mouse movement. With it you can omit paper contracts, agreements, etc. Your users will fill in documents online and sign them by moving the mouse directly on their computer.

The plug-in can be purchased from this page <http://www.itoris.com/index.php/products/joomla-form-builder#plugins>. After the payment is made you will receive the email with your login details. Please use them to log in to <http://www.itoris.com> and download the Digital Signature plug-in and save it on your PC.

## 2. Installation

To install Digital Signature you should have Smart Former Gold installed and activated. Please open the admin area and select Smart Former Gold (SFG) from the menu (**Components** → **Smart Former Gold** → **SFG Plugin Manager**). You will see the page with all your SFG plug-ins and the ability to install new plug-ins.

If you see the Digital Signature plug-in – then it is successfully installed and activated. Now it is ready for use.

If you do not see the Digital Signature plug-in or get an error during the installation – please contact Support Department. You will get the contact details in the email together with the login details.

### 3. Usage

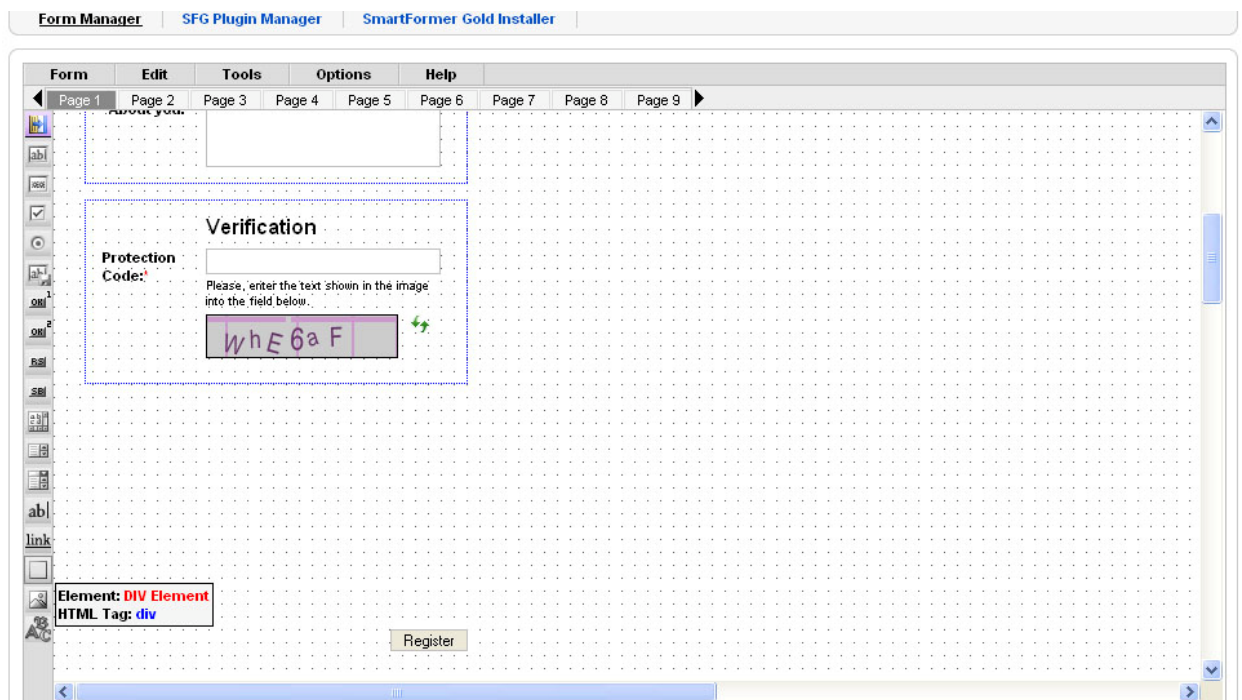

#### 3.1. Adding Signature to the form

After the plug-in is installed – please select a form in which you want to add the signature. The form can be selected in Smart Former Gold’s list of forms:

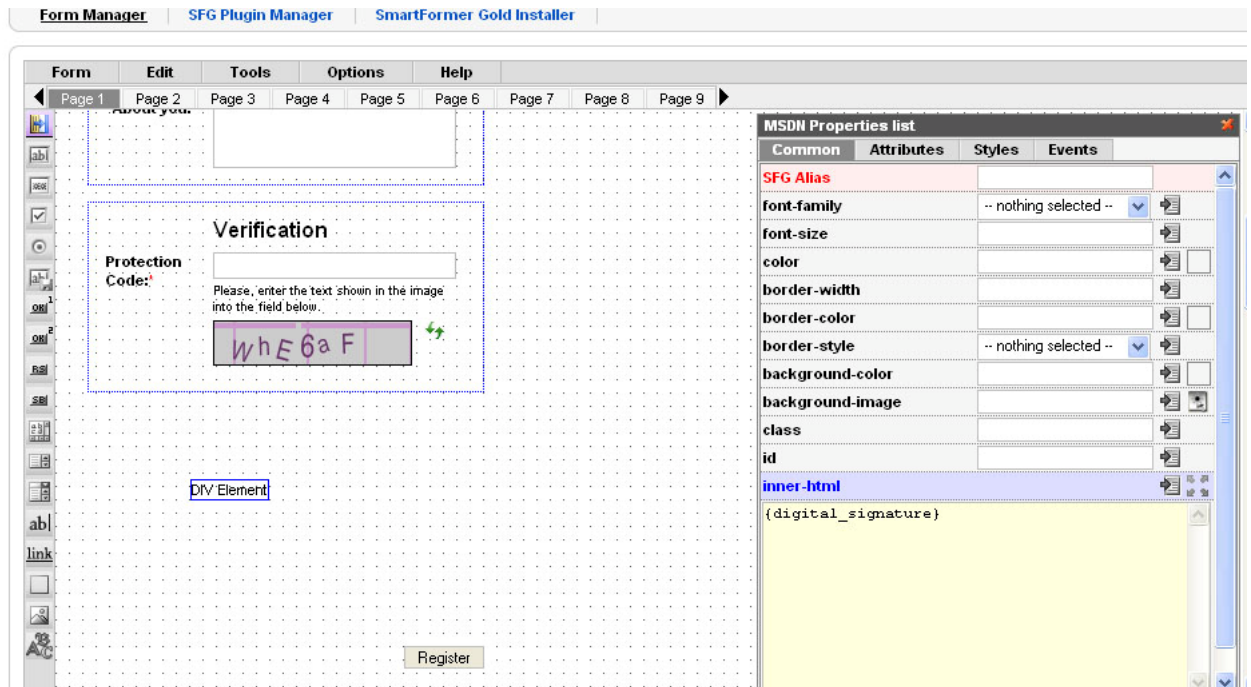

Please click the selected form’s name or create a new form. Select the place where you want the plug-in to be displayed.

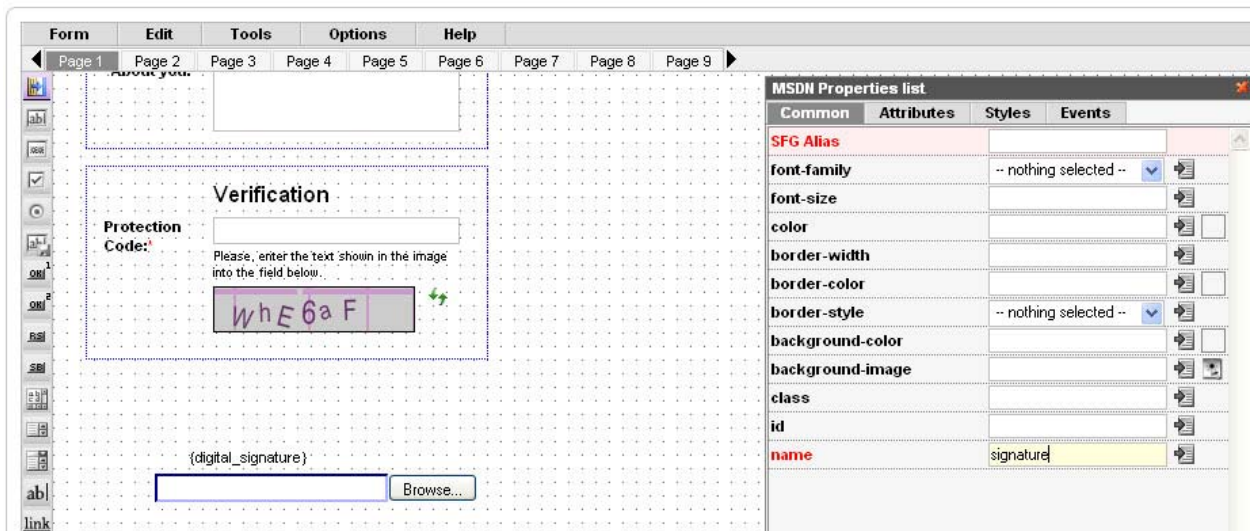

Each form has a number of available HTML-elements (they go on the left). Please select **DIV element** and drag it to the place where the signature should be.

Please click the **DIV** element added to the form. You will see the box with its properties. Add **{digital\_signature}** to inner-html property.

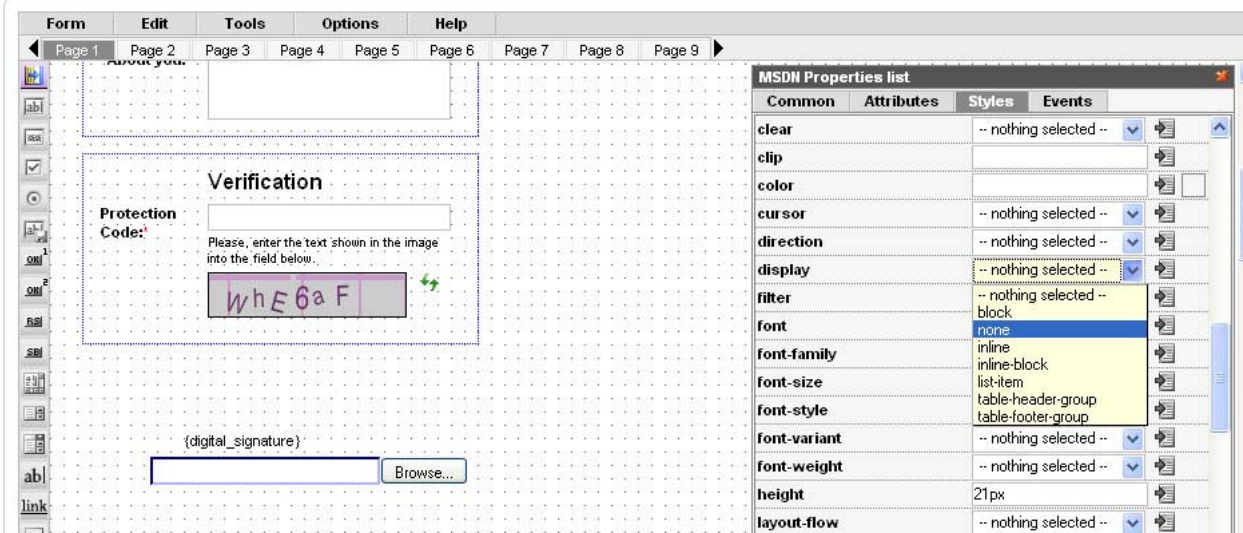

After that add an **Upload-file** HTML elements. Select it and in its name attribute add **signature**.

In the box of its properties you can see four tabs – Common, Attributes, Styles and Events. Please select Styles tab and find Display style there. Select **none**

Your **File-Upload** HTML element will disappear after that, it is correct.

Save the form.

### 3.1.1. Adding code to the form

So our signature is added to the page. Now to make it work correctly we should change the code of the form a bit.

To do it please do NOT close the form. Select **Tools** → **PHP Editor** from the menu above the form. You will see the code of the form.

Please change it in the following way:

```

$form->getPostedValues();
$sign_page = 1; // Number of page on which the signature is available. Starting from the 1st page
require_once($GLOBALS['mosConfig_absolute_path'] . '/administrator/components/com_sfg/plugins/imported/digital_s
ign_plugin/functions.php');
if ($form->page==($sign_page-1)){
    if (!isset($form->files['signature']) && ($form->submitter != -1)) {
        $form->error = "Please sign the form";
        $form->submitter = -1;
    }
}
$form->doAfterSubmitAction();
$form->renderForm();
$form->page_html = replaceDigitalSignature($form);
echo $form->page_html;

```

**BLUE** – initial code

**RED** – what should be added

**ORANGE** – what should be added with your own data

**//GREY** – description of data to be added

Please copy the red and orange code and add it to the Editor. Add the page on which your signature is added in the orange line.

Save the changes in the Editor and close it. Save the form again.

### 3.1.2. Front-end. Signature

To check how the signature will look for your users please find the form with signature again in the list of forms. Each form in the list has Direct URL. Click it. You will see your form from the front-end.

---

Name

Email

Sign your name below with your mouse and click Validate

Copyright 2009 IToris, Inc. patent pending

So your signature will be displayed as the box with area for signing and two buttons – **Validate** and **Clear**.

 Digital signature box takes some place, so perhaps you will need to edit the form in admin area a bit, shifting the elements and buttons under the signature down.

### 3.1.3. Signature usage

User will fill in the form, and then write the signature using his/her mouse.

Name

Email

Sign your name below with your mouse and click Validate

John Smith

Copyright 2009 IToris, Inc. patent pending

**Clear** button allows clearing up the area for signature.

After the signature is added – user should press **Validate** button to validate the signature. If no signature is added and **Validate** button pressed – the error message “Please add your signature” is displayed.

 After the signature is validated – there is no more ability to re-enter it again, as it will be substituted with the image containing the signature.

Name

Email

John Smith

### 3.1.4. Submitting form with signature

After the form with signature has been submitted by user – this submission (record) is available in the list of records. The signature (converted to image) is also kept there. Each record can be opened and viewed ([please see Smart Former Gold’s manual for more details](#)).

### 3.1.5. Digital Signature plug-in’s properties.

The plug-in’s properties are added to the properties of Smart Former Gold. Please open the main page of Smart Former Gold (list of forms) and press Settings button in the top button bar.

#	Form Name	Description	Records	Active	Actions	Direct URL to the form
1	Contact Us	Sample form. Allows collecting visitors' requests from the external part of the site. Features: * Conditional branching. Displaying states when US is selected * Expanding the form when a new field is added * Protected with Captcha * Saving the time of submission	-		Clone   Backup   Add Rec.	http://server.it/joomla2/index.php?option=com_sfg&formid=1
		Sample Form. Alternative login form. Can be inserted into a position as				

Below the Gold’s properties there will be the area for Signature plug-in’s ones.
